**A CRM Application for Banquet Hall Booking**

## 1. Introduction

Customer Relationship Management (CRM) systems help organizations manage customer interactions, improve business efficiency, and automate processes. This project focuses on developing a CRM application for banquet hall booking using Salesforce.

The system allows users to manage customers, banquet halls, bookings, and billing in a structured and efficient manner. It reduces manual errors, prevents duplicate bookings, and provides insights through reports and dashboards.

## 2. Objective

- To develop a CRM application using Salesforce
- To manage banquet hall bookings efficiently
- To automate booking validation using Flow
- To generate reports and dashboards for analysis

## 3. User Story

Customers need to book banquet halls for events such as weddings, meetings, and parties. The system allows users to check hall availability, make bookings, and manage payments. It ensures that no two bookings occur for the same hall on the same date and provides a smooth booking experience.

## 4. System Modules

### 4.1 Customer Module

Stores customer details such as name, phone number, and email.

### 4.2 Banquet Hall Module

Stores hall details such as name, capacity, location, and price.

### 4.3 Booking Module

Handles booking operations including customer, hall, date, and status.

### 4.4 Billing Module

Manages payment details such as amount and payment status.

**5. System Architecture**

The system is built using Salesforce CRM with:

- Custom Objects
- Lookup Relationships
- Validation Rules
- Flow Automation
- Apex Trigger (optional)
- Reports and Dashboards

**6. Project Development Steps**

1. Created Salesforce Developer Account
2. Developed Lightning App
3. Created Custom Objects
4. Defined Relationships
5. Designed Tabs and Navigation
6. Configured Page Layouts
7. Implemented Validation Rules
8. Developed Flow for automation
9. Created Reports and Dashboard
10. Performed Testing

**7. Validation Rule**

A validation rule is implemented to prevent booking dates in the past.

**Formula:**

Booking_Date__c < TODAY()

**Error Message:**
Booking date cannot be in the past.

**8. Flow Automation**

A record-triggered flow is created to:

- Check existing bookings

- Compare hall and date
- Prevent duplicate bookings
- Display an error message if conflict exists

**9. Reports and Dashboard**

**Reports Created:**

- Booking Status Report
- Billing Report

**Dashboard Components:**

- Total Bookings (Bar Chart)
- Booking Status (Pie Chart)
- Revenue (Metric)

**10. Testing**

**Test Cases:**

1. Create booking → Successful
2. Duplicate booking → Error displayed
3. Billing creation → Linked correctly
4. Dashboard → Displays correct data

**11. Advantages**

- Reduces manual work
- Prevents duplicate bookings
- Improves data accuracy
- Provides real-time insights
- Enhances customer management

**12. Limitations**

- Requires internet connection
- Dependent on Salesforce platform
- Limited customization without coding

## 13. Future Enhancements

- Online payment integration
- SMS/email notifications
- Mobile app support
- AI-based recommendations

## 14. Team Structure and Work Distribution

**Team Members**

- Monisha S
- Monesh
- Santhosh Kumar
- Velan

**Work Distribution**

**Monisha S – Development & Documentation**

- Created objects and relationships
- Implemented validation rules and flow
- Prepared project report

**Monesh – UI Design**

- Created app interface and navigation
- Designed page layouts and tabs

**Santhosh Kumar – Reports & Dashboard**

- Created reports
- Designed dashboard components

**Velan – Testing & GitHub**

- Tested application
- Verified functionality
- Managed GitHub repository

## 15. Conclusion

The CRM application successfully demonstrates how Salesforce can be used to manage banquet hall bookings efficiently. The system automates key processes, prevents errors, and provides valuable insights through reports and dashboards.
